

Bin Inventory — Item Info Update & Approval

Operator requests a batch-data change on the handheld; a warehouse manager approves it on the web before it goes live.

OPERATOR · HHT Raises the change request from the warehouse floor

1 Scan Location

Bin Inventory
Scan a location to view its items.

⦿ SCAN LOCATION

▣ SCAN OR ENTER LOCATION

BIN-A12-402

Auto

Start empty. The screen opens with only a location field — the operator scans a bin to load its contents.

5 Approvals List

Inventory > Approvals

Approval Requests
Review and process inventory update requests.

ⓘ

On approval the new batch values are written to inventory and the request is stamped with the approver and time. Declined requests leave the data untouched.

Live or rejected. Approving updates the item’s batch data instantly and marks the row Approved; declining keeps the original values.
